

RING SIZER

To be printed at original size (without scaling)

Important

To make sure your ring sizer has been printed correctly at actual size, please check that the scale below well measures 5 cm

How to measure your finger circumference?

Step 1

Take a ring (a wedding ring, for example) that you can put on the finger you are going to wear your new ring on (the size of the fingers often varies from hand to hand).

Step 2

Place the ring on the circles below. Your finger circumference corresponds to the circle whose black line appears entirely inside the ring, without you being able to see a gray background. Note the number of the circle and indicate it in your product sheet.
